The 2015 edition of the ISOCARP Awards for Excellence has been a unique one in terms of number of applications received, quality of projects and participation and interest expressed by ISOCARP community. The ISOCARP awards are, nowadays, “the place” and the context where to show the best urban/regional plans, policies and other related operational tools implemented all around the world.

The ISOCARP International Jury went through the excellent proposals delivered and eventually selected a list of projects that have been awarded on this year’s ISOCARP Congress in Rotterdam.

The jury looked for following criteria:
1) Quality in content (relevance of project’s objectives)
2) Involvement of communities in the planning process
3) Grade of innovation
4) Sustainability and replicability of the project
5) Smartness and resilience
6) Role and relevance of Public Space
7) General quality of the proposal
The 1st place was awarded to: The Ghent Canal Zone Project – a spatial, environmental and economic development process in an industrialized urban area. Project submitted by: Omgeving.

The Ghent Canal Zone Project is acknowledged as an example for integrative regional development.

The 2nd place went to the Planning for Green Eco-Districts in the City of Beijing: Carbon Accounting Standards and Tool for Statutory Zoning Plans. Project submitted by: Centre of Urban Planning and Design, Peking University, China.

The Green eco-District Plans will, for the first time in the statutory planning system of China, adopt mandatory targets in the form of low carbon and ecological planning key performance indicators (KPIs).

From National Climate Change Policies to Local Statutory Planning: Designation of Green Eco-District Plans in City of Beijing, China

14 Proposed Green Eco-Districts totaling 734 sq. km. accommodating an estimated of 3.6 mill. inhabitants planned with explicit low carbon and ecological policy goals and measures

The 3rd place was conferred to the project: Luhe City Center. Project submitted by: TAU (Thadani Architects + Urbanists).

The project makes a sound analysis of the Luhe city center and propose a set of solutions for its requalification.
Finally, a special mention was awarded to: Liupanshui Minghu Wetland Park Project. Project submitted by: Turenscape, and College of Architecture and Landscape, Peking University, China

As an element of a major campaign of environmental improvement the city government commissioned the landscape architects to develop a holistic strategy to address multiple serious problems (e.g. water pollution, flood plain management, creation of public space).

Considering the high quality of all received proposals, ISOCARP is assessing the hypothesis of publishing a book presenting the entries for the “Awards of Excellence” and “Sam van Embden Awards”.
