

- Track 1: Transforming Human Settlements
- Track 3: Envisaging Planning Theory & Practice
- Track 5: Intelligent City for People

● Track 2: Planning Activism & Social Justice

● Track 4: Urban Planning & Policy Making

● Track 6: Planning for an Interlined & Integrated Rural – Urban Development

Track 1: Transforming human settlements

Informal

Bottlenecks

Chaos

Inaccessibility

Open-ended experiments

TOD

Micro-transforming

Universal design principles

Thanks to the speakers for sharing !

Track 1: Transforming human settlements

Cities we have

Trends

- Informal settlements
- Negative spaces
- Automobile and sprawl
- Focus on consolidated urban fabric
- Conflicts and migrations
- Exclusive design principles
- Cumbersome and rigid regulatory framework

Problems

- Insecurity
- Exclusion
- High carbon footprint
- Urban-rural disparities
- Identity crisis, memories destruction
- Inaccessibility for some
- Hindrance to action

Track 1: Transforming human settlements

Cities we need

Desired outcomes

- Physically active cities
- Inclusive cities
- Urban-rural integration
- Rich social experiences
- Cities of memories
- Resilient cities

Levers to manage change

- Collaboration
- Universal design principles
- Reconsider development paragon
- Understand CAPEX vs OPEX
- Open-ended experiments
- Expanded more Nuanced approach to admitted tools

Track 1: Transforming human settlements

Cities we need

Levers to manage change

- Micro-transforming
- Environmental recovery
- Public participation
- Contextualization
- Holistic approach to sustainability

Track 1: Transforming human settlements

Relevance for South Africa

Area type (generic in the KZN context)	"Cities we have"		"Cities we need"	
	Trends	Problems	Desired outcomes	Levers to manage urban change processes
CBDs				
Suburbs and infill areas				
Former apartheid townships				
Well located informal settlements				
Densifying peri- urban settlements (often Ingonyama Trust land)				
Dispersed peri- urban settlements				
Strong economic activity areas e.g. industrial/commerci al				
Public spaces				
Transit nodes, networks & infra.				

Track 1: Transforming human settlements

Relevance for South Africa

Public spaces

- What makes a city walkable, runnable,?
- Public sphere can become loci of political and power

Transit nodes, networks and infrastructure

- Sustainable urban infrastructure + alternative technologies + financing
- Transit Oriented Development (TOD) *process* -can also work at micro and local/neighbourhood scales.
- Modified city structure to promote use of public transport and make TOD viable – opportunities around railway stations.

Relevance for South Africa

Sub-regional

- Disappointing/negative impact of investment in Lesotho under AGOA
- Promising results of decision by 3 mines in NW Province to house employees and their families in existing surrounding small towns, thereby increasing their sustainability.

Governance – a multi-faceted and over-arching dimension

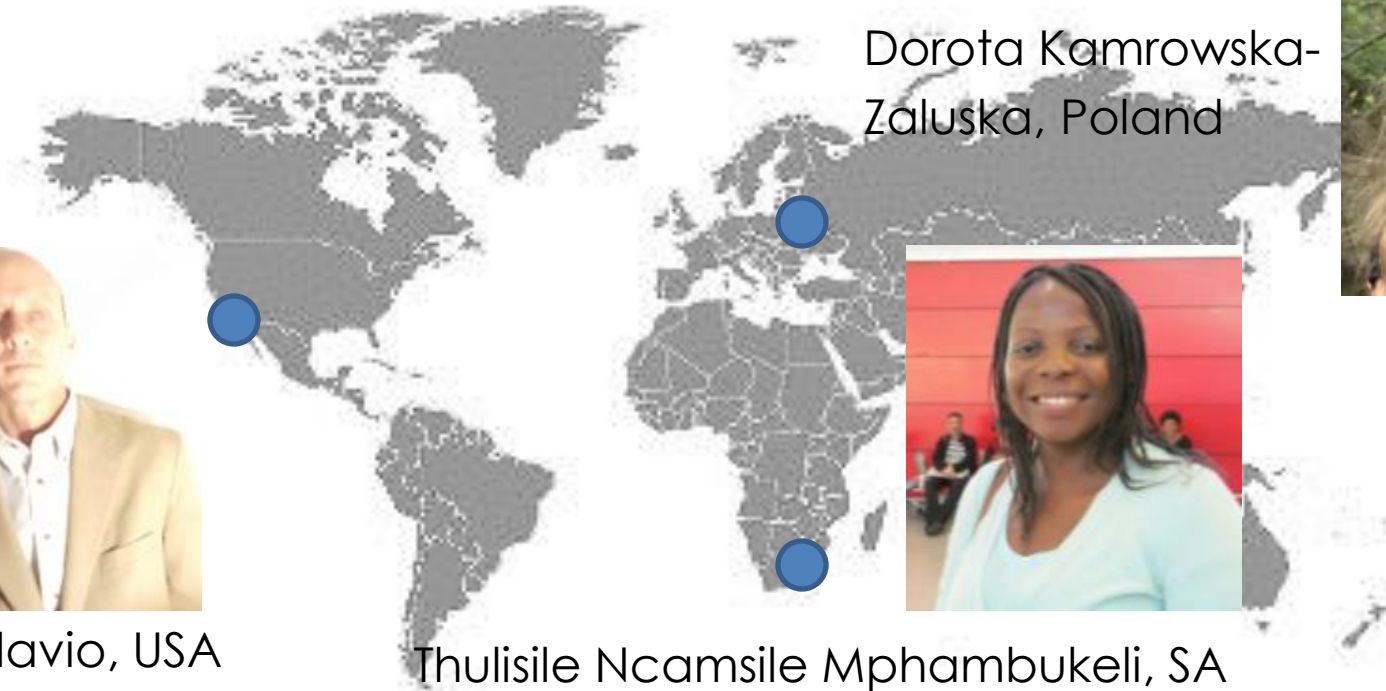

- A consistent regulatory framework is a necessary but not sufficient pre-condition for development. SA has a very elaborate framework – sometimes too complex
- Co-ordination and responsibility
 - Between planning and implementation agencies
 - Between national government policies and mandates given to local government (questions of capacity and resources to deliver)
- The human factor is often the most critical in successful developments. E.g.
 - Partnerships
 - Identifying and breaking bottlenecks
 - Manner in which changes can be introduced
 - Addressing issues of social exclusion and inequality in access to services and facilities

Track 1: Transforming human settlements

Track 2 Planning Activism and Social Justice

Brett Clavio, USA

Dorota Kamrowska-
Zaluska, Poland

Thulisile Ncamsile Mphambukeli, SA

Context: Africa – diverse perspectives presented from policy and capacity building case studies up to land use management from the social justice perspective

Track 2 Planning Activism and Social Justice

Context: diverse examples from all part of the world tackling the most important issues

- Modeling analysis
- Surveys
- Observations
- Content analysis

4 Modeling Analysis

Multivariate linear regression analysis of dependent variables and independent variables by using SPSS

The correlation coefficient of regression equation is 0.935, and the confidence level of 99% is satisfied, which indicates that the regression equation can describe the relationship between the dependent factors and independent factors.

R	R ²	Adjusted R ²	Sig
0.935	0.875	0.870	0.000

Model summary

type	Factor	Variable	coefficient	t	Sig		
Independent variable	Spatial Characteristics of commercial facilities	Scale of Commercial facilities (m ²)		0.345	0.329	0.209	
		Spatial environment quality	Comfort	Number of recreation facilities	0.653	0.534	0.357
			beauty	Outdoor greening area	0.412	0.219	0.287
			convenience	Altitude difference between indoor and outdoor	-2.329	-1.583	0.056
	Spatial Characteristics of commercial facilities	Length of walking path		-8.239	-6.253	0.000	
		Safety	Number of barrier free facilities	4.129	2.451	0.003	
			Number of ways intersection		-6.688	-5.008	0.019
			Comfort	Number of street furniture	-5.125	-1.164	0.043
		Walking road width		5.143	0.437	0.062	
		Beauty	Cleanliness	0.235	0.106	0.421	
			Street green area	0.167	0.092	0.352	
		convenience	Number of public service facilities	2.634	2.156	0.084	
			The number of small garden	3.527	2.764	0.069	
	constant			-11.22	1.664	0.001	

Results of multiple linear regression analysis

How can we contextualize spatial justice in planning?

- there is always a challenge to define spatial justice and spatial transformation
- both notions of social and spatial justice are interconnected
- we have to understand where people are and what they need
- it's all about understanding each and every issue and to address them
- we seem to be using all these terminologies but not implementing adequately

Implications for planning

- Persistent or continuous spatial inequalities - regardless of good policies and legislative frameworks
 - ‘Who are we going to serve?’
 - ‘Leave no one behind – must also count for the deprived in affluent countries’
 - ‘Municipalities forced to embrace the power of the many’
- Emerging theme: **people-centered planning** - not only as a slogan but as a new paradigm

Implications for the incorporation of activism and social justice in planning

- 'need to democratize (decolonize) the planning landscape in order to create cities that provide equal opportunities for their citizens'
- 'in authoritarian countries using "soft power" can help introduce some advanced planning practices'
- 'planner's position is enhanced by being an activist - it is more efficient to argue for something rather than against something'
- inclusive planning should be aware of ongoing neoliberal policies and the transformation in the legal process
- There are serious implication for the incorporation of activism and social justice in planning where traditional leadership is involved

Envisaging Planning Theory and Practice for the Next Decades

Milena Ivkovic Nuin-Tara Key Mark Oranje

Track 3: Theory and Practice

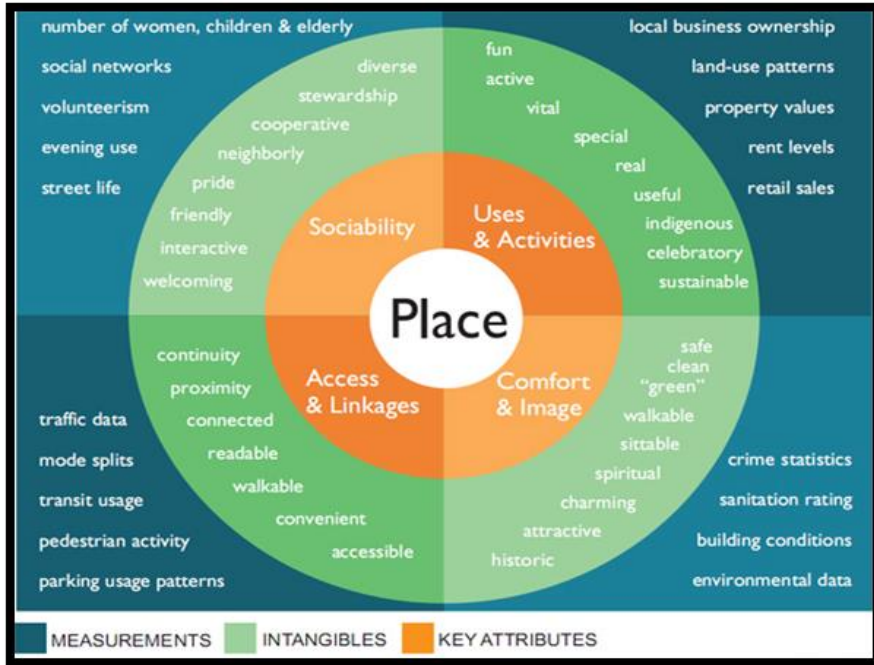

Managing Innovation and Change

- Controlled and static vs dynamic and evolving
- How does planning theory evolve to provide an elastic framework that accommodates rapid change while providing actionable and measurable guides that achieve local aspirations?

Track 3: Theory and Practice

Environmental Planning

- Environmental planning that goes beyond the natural environment but ventures into integrated place making, culture, and built environment challenges
- How can environmental planning consider the “non-tangible” cultural and social dynamics of place?

Post-colonial Planning Challenges

Track 3: Theory and Practice

- Participatory planning and meaningful, culturally relevant engagement is critical to planning globally
- How do we transform our governance system so that engagement doesn't remain just a check-box item, but is central to achieving local aspirations

Tools for Integrated Planning

- Integrating sectors and expertise to achieve the cities that that we need.
- How do we make integration happen?

Track 3: Theory and Practice

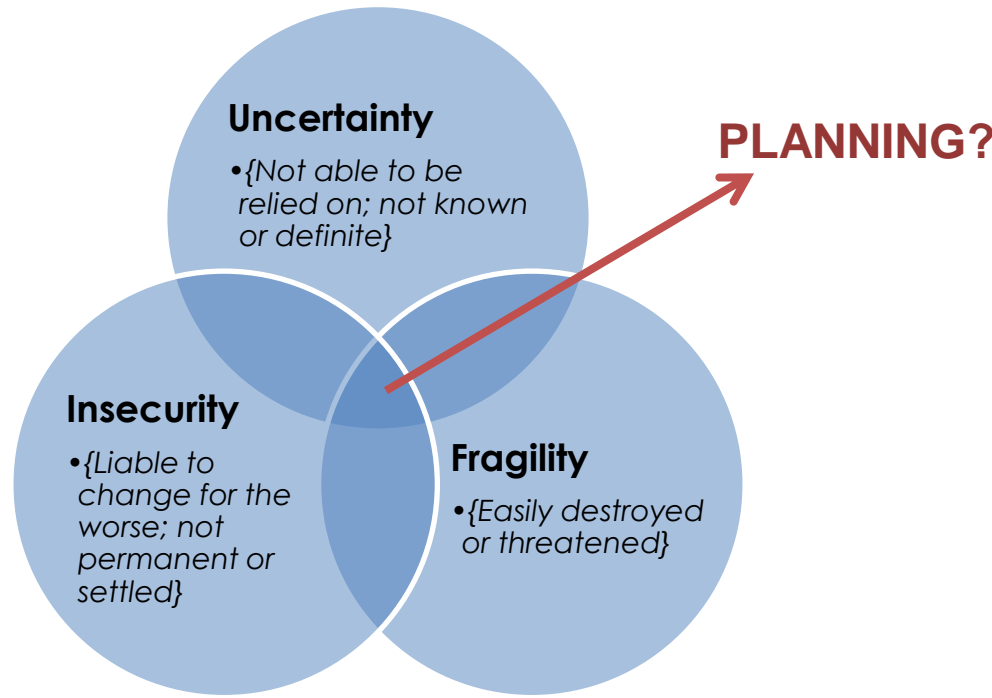

Synthesis/summary

- Changing urban form alone will not solve our current and future social, economic and environmental challenges.
- Future Research
 - Applied research
 - Cross-sector and scale integration, because planners can't do everything

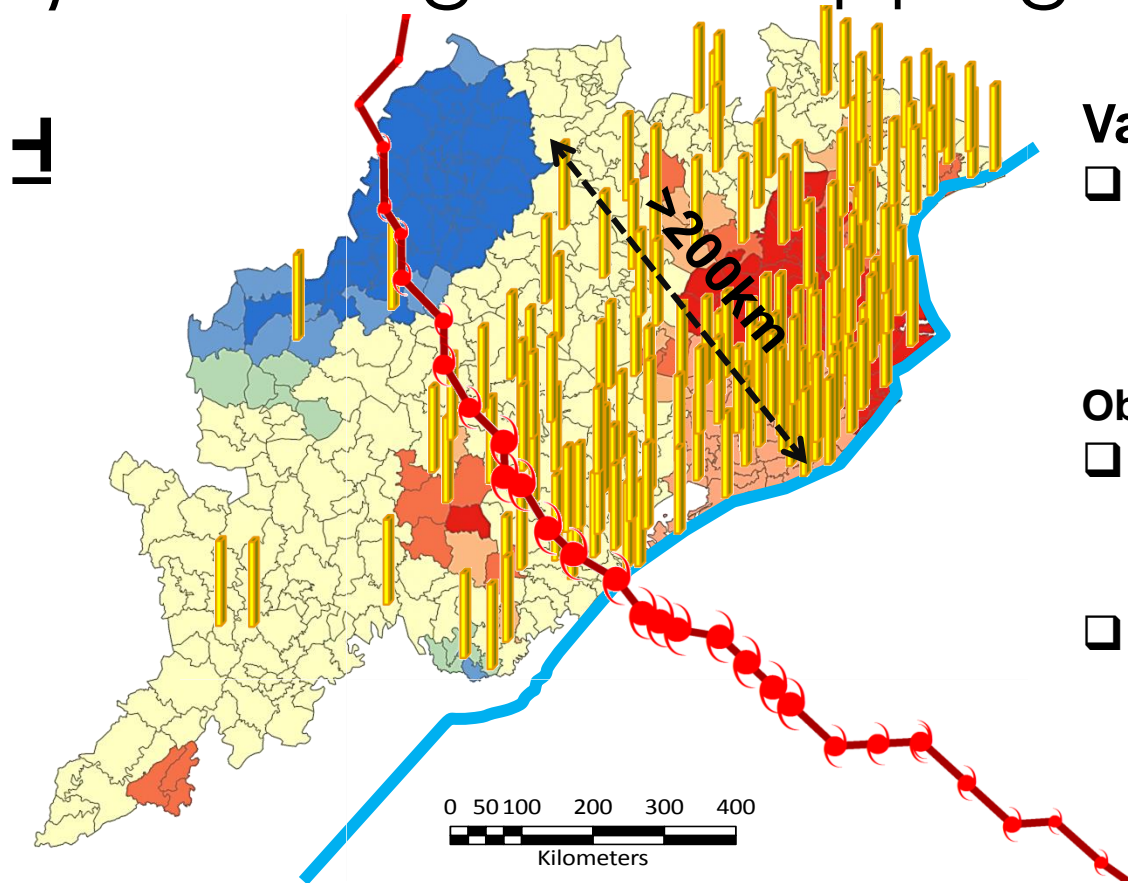

Track 3: Theory and Practice

All cities experience fragility

Igarapé Institute fragile cities data visualization project
<http://fragilecities.igarape.org.br/>

1) Assessing and mapping vulnerability

Validation

- ☐ Correlation exists between hazard impact and social vulnerability.

Observations

- ☐ Maximum impact of cyclone right side of the track.
- ☐ Area of influence is more than 200km from the coast.

2) Tools and methods for dealing with the complexity

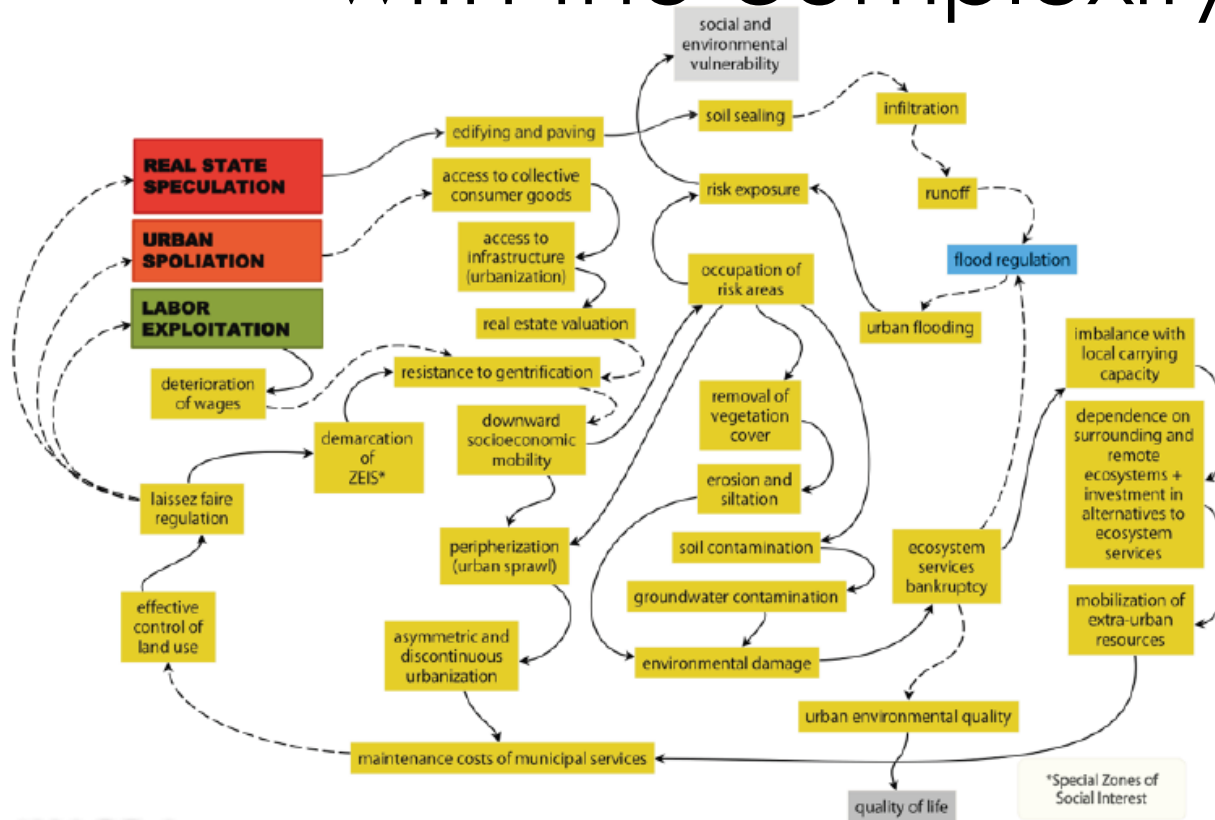

IMAGE 1

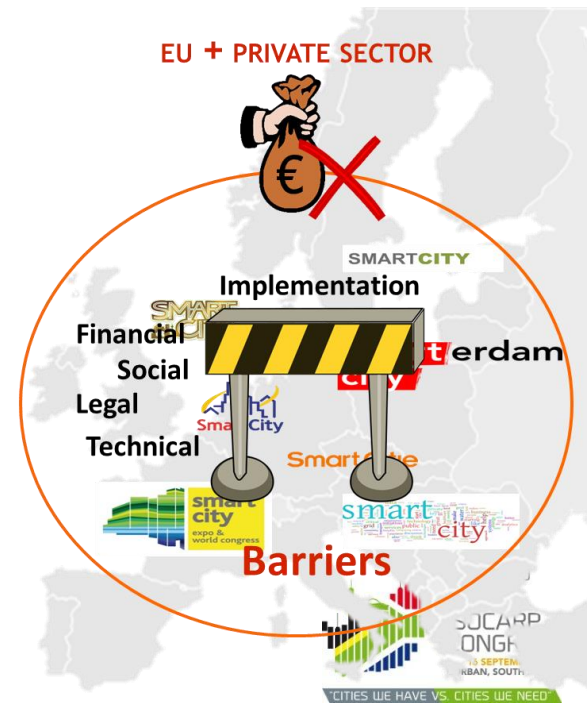

3) Old and new technology needed

SMART ENERGY CITY PROJECTS

Information &
communication technology
INTEGRATION
COLLABORATION

OPTIMIZE URBAN
ENERGY SYSTEMS
QUALITY OF LIFE

4) Safety and security risks undermine development and growth

COLD WAR ERA

- Safety hazards took places in specific regions or countries
- Governments placed emphasis on national and global security rather than the concerns of ordinary people.
- Security forces based on human power and weapon

POST-COLD WAR ERA

- Human security, which pays attention to the concerns of ordinary citizens, has come into prominence because of increasing intra-urban conflicts
- Rising social problems, marginalised groups and urban terrorism
- Emerging new security technologies such as security softwares, CCTV systems and GIS technologies

TERRORIST INCIDENTS 2014

13,370

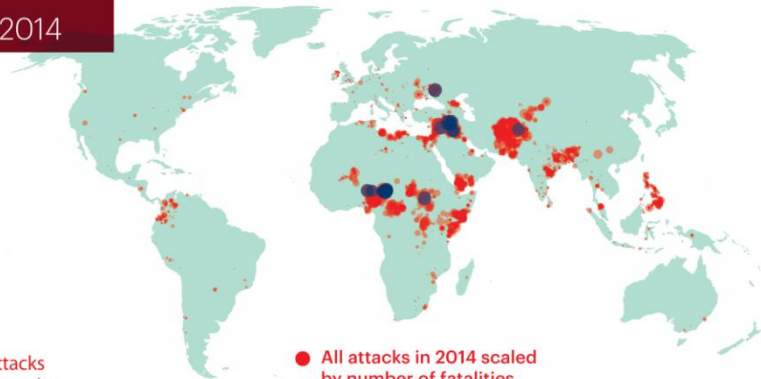

terrorist attacks
in 93 countries

32,658

people killed in
terrorist attacks

78%

killed in terrorist attacks
were in just five countries

- All attacks in 2014 scaled by number of fatalities
- Worst attacks in 2014

5) Multilateral and Legal approaches

Public interest issues were not raised at all in residential density cases

6) Flexibility

Status	Current	Proposed
Zoning	SR2	SR2
Uses	Dwelling House Second Dwelling Utility Service Urban Agriculture Shelter House Shop Home Occupation Bed and Breakfast Home Child Care Informal Trading Any educational, religious, occupational or business purposes; with dominant residential use.	All uses permitted in SR2 Consent uses: Basket of Rights: Restaurant Office Boarding House (Guest House) Service Trade
Floor factor (FF)	1	1.5 for property owners who requested additional FF

Subject properties
included in consent and
departure application

7) Planning - role and competencies

Planning processes lengthy and complex

designer as planning professional
needs to integrate quality of design
with '*collaborative practice*' skills:

incl. mediating design, communicating,
disseminating, enlisting stakeholders,
inviting diverse views, moderating and
adapting

8) Institutional challenges

- Devolution of **resources**: money, skills
- **Low priority** of urban planning, Institutional **rigidities**, and **Inadequate support** to local level
- **Corruption**, influence of power, and entrenched interests

Conclusions

1. How can the traditional planning processes such as development controls, master-planning, etc. be made more relevant and responsive?
2. What new ways of working may planners need in order to deal with these levels of complexity?
3. What paradigm shifts may be needed in the profession?

Key Themes

Innovation, Spatial Form, Knowledge-Driven Economy,

Track 6: Planning for interlinked and integrated rural-urban development

Questioning rural-urban interface

How do we improve:

- existing planning processes to provide for greater economic opportunities and social inclusion?
- livelihood opportunities in rural areas?
- the process of migration to be more inclusionary?
- application of special planning tools?
- preservation of cultures and traditions through the planning process?
- livelihood and livability in the peri-urban areas?

Track 6: Planning for interlinked and integrated rural-urban development

Spatial planning tools

Need to revisit existing models

Migration, culture and tradition

- What role should governments, communities and planners play to protect and conserve cultural traditions and livelihoods?
- How to integrate migrants into new urban settings?
- And how to reintegrate returning migrants?

Track 6: Planning for interlinked and integrated rural-urban development

Planning at a regional scale

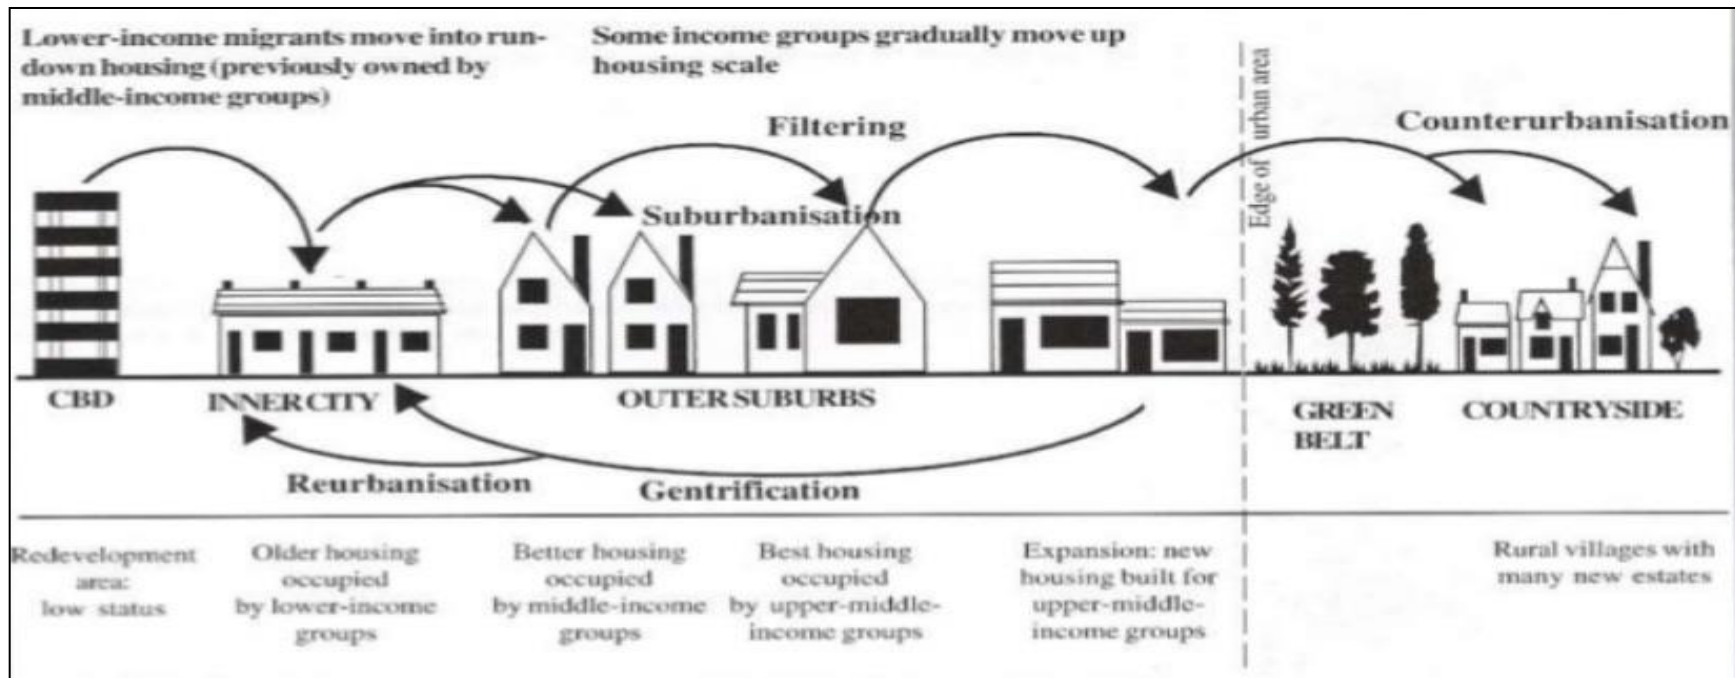

- **Correlation between intra-regional trade and regional economic growth**
- **Regional integration Impacting spatial economic means**
- **Changing patterns of migration**
- **Emerging mega-urban regions blurring rural-urban boundaries**

Peri-urban interface

Track 6: Planning for interlinked and integrated rural-urban development

21

- How do we manage livelihood and liveability of the people in transitional spaces?

Track 6: Planning for interlinked and integrated rural-urban development

Conclusion:

Cities we have vs cities we need

- Urban and rural spaces need to be considered interdependent for sustainable development
- There is tremendous potential for village-based rural livelihood development through micro-planning
- Local initiatives need to be integrated into the regional spatial settings – through an integrated regional planning framework
- Advancement in spatial planning tools offer new possibilities to integrate developmental mechanism at multiple scales of governance - to increase efficiency in delivery of basic services
- Need to improve the institutional mechanism of coordination, streamline existing governance systems and build human resource capacity

Track 6: Planning for interlinked and integrated rural-urban development
